

# REAL OUTDOOR FITNESS EQUIPMENT FIT FOR ANY CAMPUS.

Outdoor-Fit's design philosophy is centered around bringing real indoor commercial fitness equipment to the great outdoors in a design that is completely weatherproof, super durable, and compact. With real exercise biomechanics at the forefront of our innovation, our outdoor fitness equipment will be an extension of your indoor fitness center. We deliver real exercise and benefits for real results.

## SOURCEWELL

We're one of only three outdoor fitness equipment manufacturers to be awarded a Sourcewell contract. Work smarter, save money and make the procurement process more efficient using a preapproved company like Outdoor-Fit.

## FIT US ANYWHERE

No space, no problem! Our equipment's small footprint makes finding a home for us on your campus easy. Our equipment is perfect for unused or tight areas such as residence pods, small pocket parks, or next to sports fields.

## HOW TO PROGRAM OUTDOOR FITNESS EQUIPMENT

Effectively programming your outdoor fitness equipment is key to getting the most from your investment. Equipment like ours which comes with built-in programming, is an easy way for students, staff, and faculty to jump into using the equipment right away. Our fitness programming provides various workouts designed for beginner, intermediate and advanced users, and they're available by scanning the QR code on our instructional placards.

An outdoor gym with real fitness equipment can also be used for personal training sessions and, depending on the size of the outdoor gym, for bootcamps and varsity team workouts.
